

Activity		How it improves the project process?	Activities
Julián	upload, download and display of therapy results	<p>During last session I have built the app desktop side, where user will upload the .txt data with a email. I also build the cloud collection with the corresponding attributes as well as the app components and UI for users to be able to download their respective data (linekd by their email authentication) directly on the app.</p> <p>This allow the users to upload their data to the cloud and seeing their respective results on their phones without the need of transferring the data manually from computer to phone.</p>	<ul style="list-style-type: none"> <li>• Create conection from database to app.</li> <li>• Page to show results.</li> <li>• React native components for previous steps.</li> <li>• Create python app to upload data from windows to appwrite database.</li> <li>• Processing and optimize the data treatment.</li> </ul>
Emilio	System	Increases system reliability	-Enhanced existing features for better performance

	Improvements	and user satisfaction	<ul style="list-style-type: none"> <li>- Improved error handling and user feedback</li> <li>- Optimized user interface</li> </ul>
<b>Abraham</b>	Investigation for future approaches and exploration of new features	Ensures the project stays innovative and adaptable to emerging needs. Identifies potential upgrades or integrations.	<ul style="list-style-type: none"> <li>- Researched trends and new technologies</li> <li>- Proposed potential feature upgrades</li> <li>- Tested prototype concepts</li> </ul>
<b>Luis</b>	AI Model Development	<p>Strengthens analysis capabilities for better results</p> <ul style="list-style-type: none"> <li>- Increases the reliability of breath recognition</li> </ul>	<ul style="list-style-type: none"> <li>- Expanded training dataset</li> <li>- Improved model accuracy</li> <li>- Conducted performance testing</li> </ul>
